

In order to prepare for the Certified Cloud Practitioner exam I would recommend the following:

1. Re-read the learning AWS book from the class and do the exercises in the book. To see the exercises being done live that you can follow along with, you can watch myself or one of my engineers walk you through several hands on videos in my online video library at <https://itjobhacks.vhx.tv/aws-fundamentals-hands-on-tutorials>
2. Take the free 6 hour digital learning class AWS cloud practitioner essentials that Amazon offers. You can access that here: <https://www.aws.training/Details/Curriculum?id=27076>
3. Read over the information about the exam and download the exam guide and sample questions here: <https://aws.amazon.com/certification/certified-cloud-practitioner/>
4. This exam can be taken from home. Schedule your exam here: <https://www.aws.training/certification?src=practitioner>
5. Two weeks before your exam, take the practice exam. You can schedule the practice exam here: https://www.certmetrics.com/amazon/candidate/exam_scheduling.aspx
